Interested in visiting Nevada in next 24 months	41%	57%
Planning on visiting Nevada in next 12 months	23%	42%

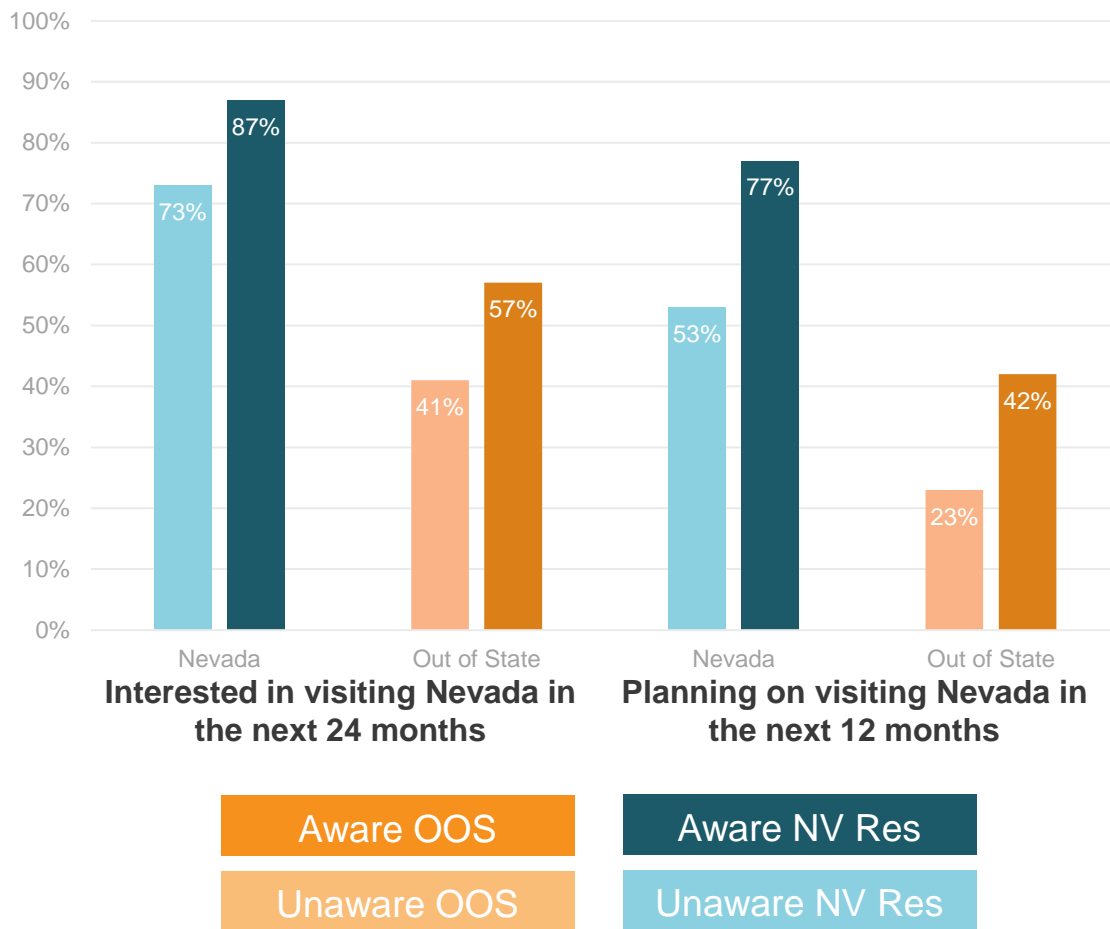

Nevada Residents

METRIC	UNAWARE	AWARE
Interested in visiting Nevada in next 24 months	73%	87%
Planning on visiting Nevada in next 12 months	53%	77%

Awareness measures the percent of respondents who recall Travel Nevada's efforts. Reporting includes whether those who were aware of the Travel Nevada brand were more likely to have interest or intent to visit the state.

Why this is important: Awareness is tied to perception, which we can affect based on our creative, content, and strategy. With spending/budget levels being variable, it is important to track impacts our efforts may have on travel planning and travel interest.

**Interest in Future Travel
 FY21**
 Source: OmniTrak Group

Takeaways

- In FY21, those who were aware of any efforts (including owned and earned), were more likely to consider Nevada as a travel destination.
- Nevadans who were aware of any efforts had a 14 point gain in interest to visit the state in the next 24 months and a 24 point gain in planning to visit the state compared with those who were unaware. The gains for the out of state audience were 16 and 19 points respectively.
- Future iterations of this report will include information on brand perception, incremental spending increases, and other impressions we can affect based on our efforts.

Nationwide, what is the current intent to consider or plan travel?

Why this is important: Knowing how consumers feel about travel preparedness, what types of trips they are willing to take, and when sentiment begins to shift, allow us to identify how we may be most effective in the marketplace.

Desired Destinations

Which domestic destinations do you most want to visit in the next 12 months?
Source: Destination Analysts

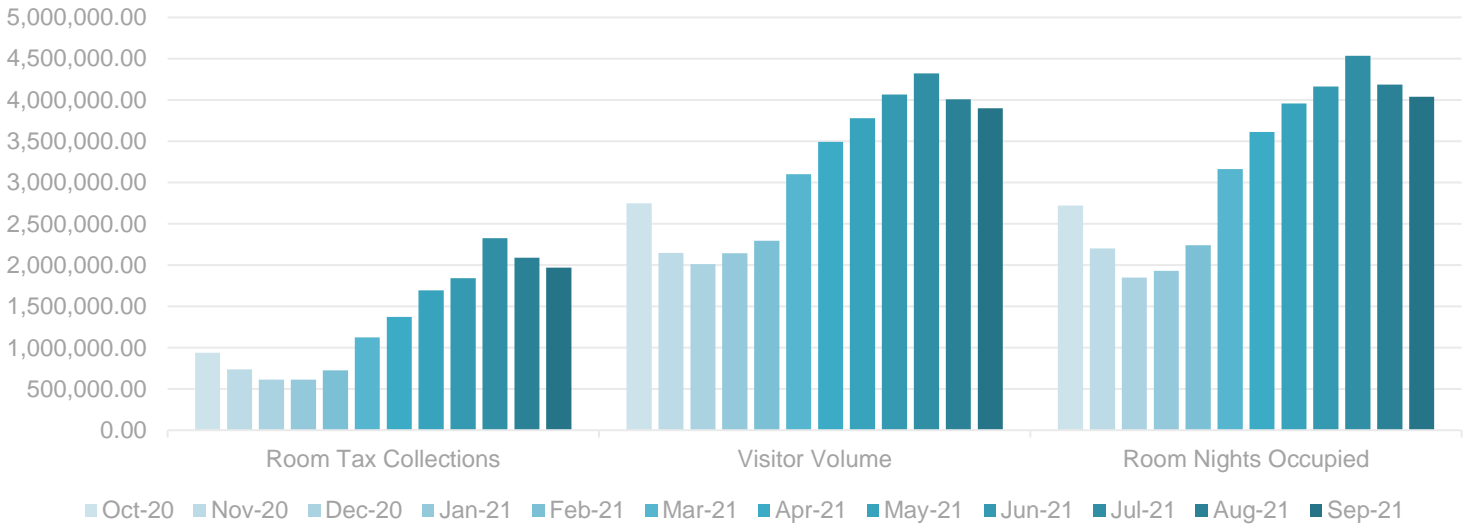

Takeaways

- Concern about contracting the coronavirus has tended to follow case counts in 2021. When COVID-19 case counts began to fall in the first quarter of 2021 amid the rollout of vaccinations, concern about contracting the virus began to fall as well. Similarly, when case counts began to rise due to the Delta variant in the summer of 2021, concern about contract the virus also rose.
- However, excitement to take a weekend getaway in the next month continued to remain elevated in the summer months even as concern for the virus also began to rise. This may be an indication that travelers, though still concerned about the coronavirus, may not be as willing to forego travel plans even when case counts begin to rise.
- Confidence in being able to travel safely has similarly remained elevated in the summer months, even as outlook for the coronavirus situation worsened.
- As consumers consider future travel, Las Vegas remains top of mind.

Statewide, how are visitor statistics and health metrics performing?

Why this is important: Visitation to the state is an ecosystem in which Travel Nevada seeks to positively impact tourism based on branding efforts, and room tax directly impacts our budget and the programs we can perform. The safety and health of residents and visitors is directly tied to the economic outlook of the tourism industry.

Monthly Report Data
 October 2020 - September 2021

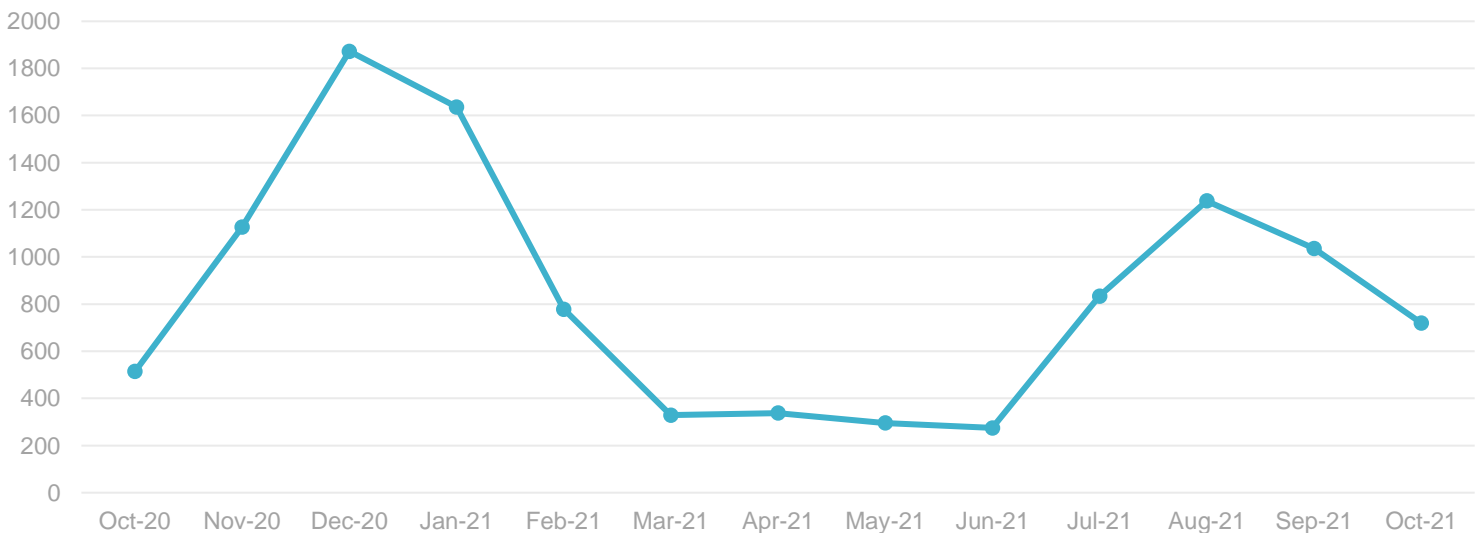

Room tax collections (directly impacts our budget)

Visitor volume (economic impact)

Room nights occupied (percentage of total inventory)

Nevada COVID Hospitalizations

Percent Of NV Population With At Least One Dose
 Source: CDC*

*As of the last day of month

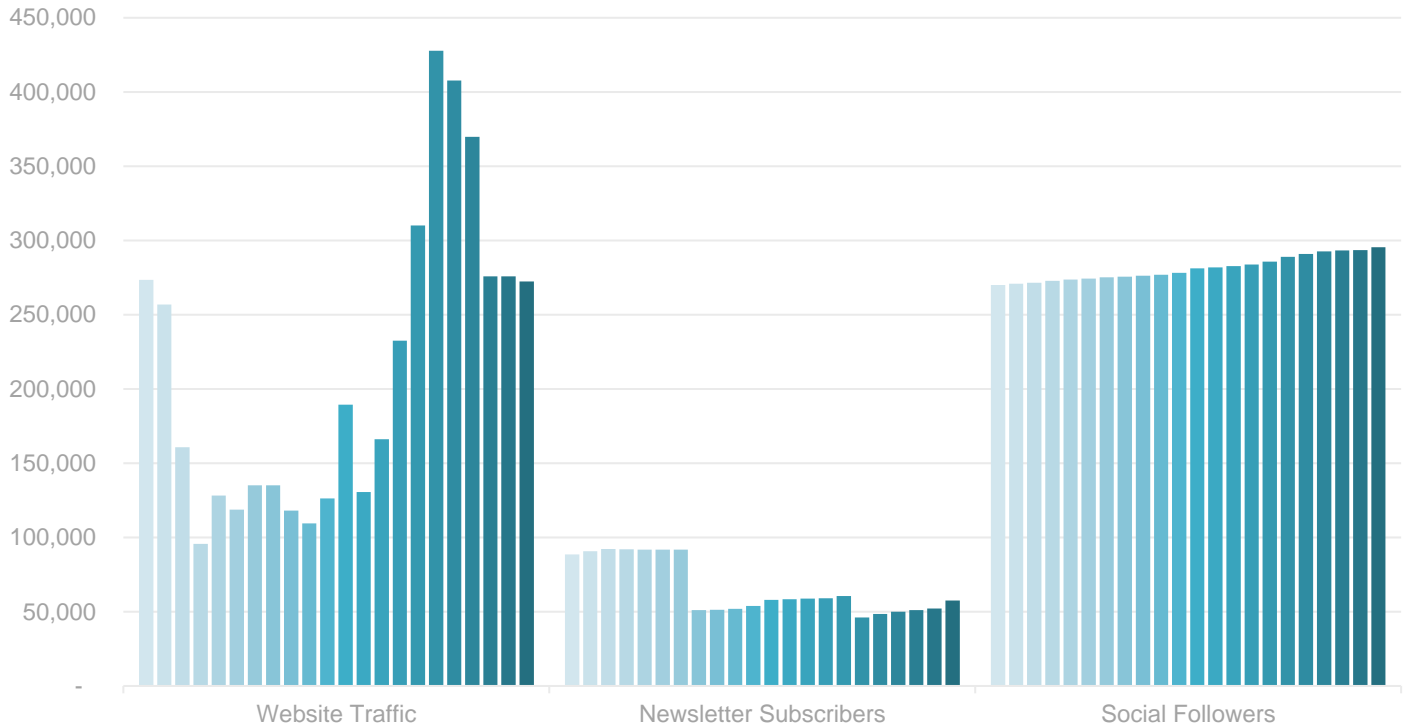

Takeaways

- Although COVID-19 case counts and hospitalizations rose during the summer months of 2021, room tax collections, visitor volume and room demand also rose. This may be an indication that COVID-19 health measures may not be as directly tied to travel as was seen during the height of the pandemic in 2020.
- The Delta variant did, however, lead to an increase in average daily hospitalization counts through the summer. This measure began to fall in September and continued to fall in October though.

How are consumers engaging with Travel Nevada?

Why this is important: These metrics have been identified as consistent measures of ways we can be impactful, even with smaller budgets.

Takeaways

- When paid efforts increase, although site traffic increases, time on site tends to decline. We've seen this relationship at work once paid advertising resumed in the Spring of 2021, though average session duration has still tended to be above levels from before the launch of the new site.
- Average time on site from organic sources have remained fairly constant and above levels from prior to the launch of the new site, which is an indicator that the new website is more engaging.
- Our email audience has continued to engage well with our content, performing well above benchmark levels.
- The social media space was challenging to navigate in 2020, as we were not only impacted by a global pandemic, but the volatile socio-political environment. When paid efforts did resume (in the Fall of 2020 and Spring/Summer of 2021), more people could be reached, resulting in better engagement.
