## RESEARCH & ANALYSIS

Kyle Shulz, Gabriel Mortensen

*Data Source: TNS Travels America / TravelTrak America*

## METHODOLOGY OVERVIEW

The 2024 Nevada Visitor Profile and Territory Profiles were compiled using data collected from the Travel Nevada Domestic Visitor Profile Survey administered monthly to qualified respondents.

Respondents are deemed qualified based on their responses to Omnitrak's monthly national TravelTrak America survey. Omnitrak has partnered with a single U.S. based managed panel provider to administer the monthly TravelTrakAmerica survey, as well as the follow-up Travel Nevada Visitor Profile Survey.

## SURVEY QUALIFICATIONS

Each month, TravelTrakAmerica survey invitations are sent to a nationally representative sample of U.S. households based on the most recent U.S. census data for region, state, age, and household income.

Respondents are initially asked a series of questions (e.g., demographics, perceptions, past year travel, etc.) to determine whether they are a non-traveler or traveler. "Travelers" are defined as having taken one or more trips more than 50 miles from home (each way, excluding commuters) during the past 12 months.

Each month more than 9,000 respondents qualify as U.S. travelers. A wide variety of information (e.g., travel motivations, travel intent, vacation availability, trip timing, etc.) is collected from these travelers. Additional detailed information about trips taken during the past month is collected from approximately 4,000 travelers who took at least one trip in the prior month.

To qualify for the Travel Nevada monthly survey, respondents must have taken a leisure trip to or within Nevada during the previous month. Qualified respondents who took more than one Nevada leisure trip in the month prior are instructed to provide information about their most recent Nevada leisure trip.

## WEIGHTING

Respondents are assigned a weight based on their demographic representation among the U.S. population. The demographic weight is based on all panelists responding to the qualification questions (i.e., travelers and non-travelers).

When the demo weight is applied, results generated reflect all travel by a demographically representative sample of the U.S. population. Applying the demo weight generates results weighted to ensure the respondent sample is demographically representative of the U.S. population.

## NEVADA TERRITORY QUALIFICATIONS

To ensure the survey captures all Nevada destinations visited to the best of its ability, respondents are deemed a territory visitor based on their responses to questions asking what city they visited, events attended, and specific locations/attractions visited. If a respondent answers that they have been to a county, city, area, and/or participated in an event within a territory, then they are marked as a visitor to that territory. It should be noted that respondents can be marked as visitors to multiple territories. For example, a respondent who noted travel to Las Vegas and Tonopah would be marked as a visitor to both the Las Vegas and Nevada Silver Trails territories.

It should also be noted that, to enhance sample sizes, profiles for Nevada’s three rural territories are based on two-year aggregated data. For example, columns labeled “2024/2023” reflect combined responses from calendar years 2023 and 2024, representing a two-year aggregate for these territories.

## METHODOLOGICAL NOTE

Q16 in each territory profile outlines the proportion of visitor nights spent in various property types. Across territories, the percentage of nights attributed to “casino hotel/motel” accommodations declined by seemingly wide margins from the previous year.

This proportion is derived by dividing the average number of nights spent in a specific accommodation type by the average length of stay among overnight visitors. Because the output is calculation-based, even small changes in the input metrics can lead to seemingly significant shifts in the resulting percentage.

For example, statewide data shows that in 2023, the average length of stay among overnight visitors was 3.46 nights, with 2.31 nights attributed to casino hotel/motel stays—yielding a proportion of 66.8%. In 2024, although the average length of stay increased to 3.84 nights, the average attributed to casino hotel/motel stays declined slightly to 2.17 nights, resulting in a lower proportion of 56.5%.

It’s worth noting that territories with smaller sample sizes are more susceptible to year-to-year fluctuations. Additionally, while not explicitly stated in the profiles, the overall percentage of travelers who reported staying at a casino hotel/motel at any point during their trip remained relatively stable in 2024.
